

Bellwork

05/08/12

Find the surface area of the solid formed by the net.

1.

$$SA = 2(B) + \underline{h(P)}$$

$$B = 4^2 = 16$$

$$P = 4(4) = 16$$

$$h = 16$$

$$SA = 2(16) + 16(16)$$

$$= 32 + 256$$

$$SA = 288 \text{ cm}^2$$

Geometry
12.3 Surface Area of Pyramids and Cones
Standard(s): 4

Vocabulary:

Pyramid: A polyhedron in which the base is a polygon and the lateral faces are triangles with a common vertex.

Lateral Edge: Intersection of two lateral faces.

Base Edge: The intersection of the base and a lateral face.

Regular Pyramid: A pyramid with a regular polygon for a base, and the segment joining the vertex and the center of the base is perpendicular to the base.

Slant Height: The height of a lateral face of the regular pyramid.

THEOREM*For Your Notebook***THEOREM 12.4** Surface Area of a Regular Pyramid

The surface area S of a regular pyramid is the sum of the **base area** and the **lateral area**:

$$S = B + \frac{1}{2}Pl,$$

where B is the area of the base, P is the perimeter of the base, and l is the slant height.

Cone: A solid with a circular base and a vertex that is not in the same plane as the base.

Right Cone: A cone with a segment, joining the vertex and the center of the base, perpendicular to the base and the slant height is the distance between the vertex and a point on the base edge.

Lateral Surface: The surface of a cone that consists of all segments that connect the vertex with points on the base edge.

THEOREM*For Your Notebook***THEOREM 12.5** Surface Area of a Right Cone

The surface area S of a right cone is the sum of the **base area** and the **lateral area**:

$$S = B + \frac{1}{2}Cl = \pi r^2 + \pi rl,$$

where B is the area of the base, C is the circumference of the base, r is the radius of the base, and l is the slant height.

Lateral Area of Regular Pyramids

Find the area of each lateral face of the regular pyramid.

$$\text{Lateral Area} = \frac{1}{2}Pl$$

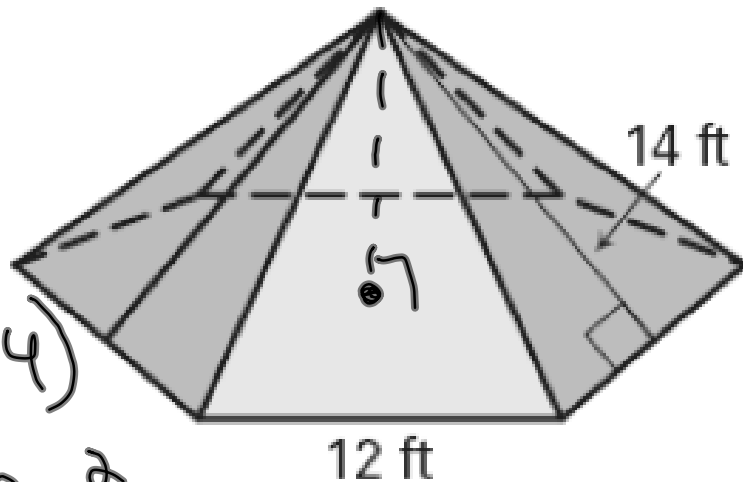

$$P = 6 \cdot 12 = 72$$

$$l = 14$$

$$LA = \frac{1}{2}(72)(14)$$

$$LA = 504 \text{ ft.}^2$$

$$\frac{504}{6} = 84 \text{ ft.}^2$$

Surface Area of a Regular Pyramid

Find the surface area of the regular pyramid. Round your answer to the nearest hundredth.

$$SA = B + \frac{1}{2}Pl$$

$$B = \frac{1}{2}aP$$

$$\frac{1}{2}(1.7)(12) = 10.2$$

$$P = 2 \cdot 6 = 12$$

$$l = 7$$

$$SA = 10.2 + \frac{1}{2}(12)(7)$$

$$= 10.2 + 42$$

$$SA = 52.2 \text{ m}^2$$

Lateral and Surface Area of a Right Cone

Find the lateral area of the right cone. Round your answer to the nearest hundredth.

$$\text{Lateral Area} = \frac{1}{2}Cl$$

$$\begin{aligned} C &= 2r\pi \\ &= 2(6)\pi = 12\pi \end{aligned}$$

$$\begin{aligned} 6^2 + 8^2 &= l^2 \\ l^2 &= 100 \\ l &= 10 \end{aligned}$$

$$\begin{aligned} LA &= \frac{1}{2}(12\pi)(10) \\ &= 60\pi \\ LA &= 188.5 \text{ m}^2 \end{aligned}$$

Find the surface area of the right cone. Round your answer to the nearest hundredth.

$$SA = B + \frac{1}{2}Cl$$

$$\begin{aligned} B &= r^2\pi \\ &= 16^2\pi \\ &= 256\pi \end{aligned}$$

$$\begin{aligned} C &= 32\pi \\ l &= 25 \end{aligned}$$

$$\begin{aligned} SA &= 256\pi + \frac{1}{2}(32\pi)(25) \\ &= 656\pi \\ &= 2060.88 \text{ mm}^2 \end{aligned}$$

Multiple Solids

Find the surface area of the solid.

$P = 40.8$
 $l = 12.81$
 $l^2 = (11.75)^2 + (5.1)^2$
 $l = 12.81$
 $LA = 261.31 \text{ ft}^2$

$SA = B + Ph$
 $B = 10.2^2 = 104.04$
 $P = 4(10.2) = 40.8$
 $h = 20$
 $SA = 104.04 + 20(40.8)$
 $= 920.04 \text{ ft}^2$

920.04
 $+ 261.31$

 $SA = 1181.35 \text{ ft}^2$
