Use the figure below the problems.

1. If $UV=13$, find RT .

$$RT=26$$

2. If $ST=20$, find UW .

$$UW=10$$

3. If the perimeter of $\triangle RST=68$ in., find the perimeter of $\triangle UVW$.

$$34 \text{ in.}$$

4. If $VW=2x-4$ and $RS=3x-3$, what is VW ?

$$2(2x-4) = 3x-3$$

$$4x-8 = 3x-3$$

$$x = 5$$

$$2(5)-4$$

$$VW = 6$$

Geometry
5.2 Use Perpendicular Bisectors
 Standard(s): 3,6

Vocabulary:

1. **Perpendicular Bisector:** A segment, ray, line, or plane that is perpendicular to a segment at its midpoint.
2. **Equidistant:** When a point, between two figures, is the same distance to each figure.
3. **Concurrent:** When three or more lines, rays, or segments intersect in the same point.
4. **Point of Concurrence:** The point of intersection of the lines, rays, or segments.
5. **Circumcenter:** The point of concurrency of the three perpendicular bisectors of a triangle.

CIRCUMCENTER The point of concurrency of the three perpendicular bisectors of a triangle is called the circumcenter of the triangle. The circumcenter P is equidistant from the three vertices, so P is the center of a circle that passes through all three vertices.

As shown above, the location of P depends on the type of triangle. The circle with the center P is said to be *circumscribed* about the triangle.

THEOREMS *For Your Notebook*

THEOREM 5.2 Perpendicular Bisector Theorem

In a plane, if a point is on the perpendicular bisector of a segment, then it is equidistant from the endpoints of the segment.

If \overline{CP} is the \perp bisector of \overline{AB} , then $CA = CB$.

Proof: Ex. 26, p. 308

THEOREM 5.3 Converse of the Perpendicular Bisector Theorem

In a plane, if a point is equidistant from the endpoints of a segment, then it is on the perpendicular bisector of the segment.

If $DA = DB$, then D lies on the \perp bisector of \overline{AB} .

Proof: Ex. 27, p. 308

THEOREM *For Your Notebook*

THEOREM 5.4 Concurrency of Perpendicular Bisectors of a Triangle

The perpendicular bisectors of a triangle intersect at a point that is equidistant from the vertices of the triangle.

If \overline{PD} , \overline{PE} , and \overline{PF} are perpendicular bisectors, then $PA = PB = PC$.

Proof: p. 933

Perpendicular Bisector

Has to...

1. Be \perp to a segment
2. Cut the segment into 2 \cong pieces

Has...

1. A point on it that is equidistant from the endpoints of the segment

Circumcenter

Has to...

1. Be a point of intersection of all 3 \perp bisectors

Is...

1. Equidistant from the vertices of the triangle

Use the Perpendicular Bisector Theorem

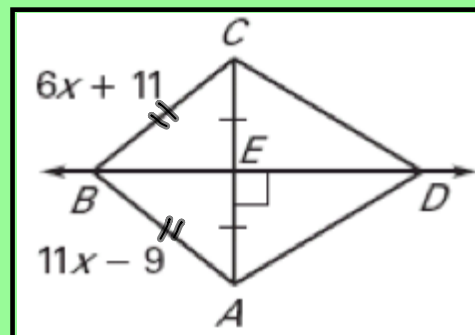

In the diagram, \overline{RS} is the perpendicular bisector of \overline{PQ} . Find PR .

$$\begin{aligned}
 &48\left(\frac{9}{2}\right) - 9 \\
 &36 - 9 \\
 &PR = 27
 \end{aligned}$$

$$\begin{aligned}
 8x - 9 &= 6x \\
 2x &= 9 \\
 x &= \frac{9}{2}
 \end{aligned}$$

Find AB .

$$6x + 11 = 11x - 9$$

$$5x = 20$$

$$x = 4$$

$$11(4) - 9$$

$$44 - 9$$

$$AB = 35$$

Use the Concurrency of Perpendicular Bisectors

Tell whether the information in the diagram allows you to conclude that C is on the perpendicular bisector of \overline{AB} . Explain.

C is on the \perp bisector

Convers of the
 \perp bisector theorem

Use Perpendicular Bisectors

In the diagram, \overline{JN} is the perpendicular bisector of \overline{MK} .

Find NM. 35

Find JK. $7y - 6 = 5y + 8$
43 $2y = 14$

Find KL. $y = 7$
50 $7(7) + 1$

Find ML. $9(7) - 13$
50

Use Perpendicular Bisectors

In the diagram, the perpendicular bisectors of $\triangle MNP$ meet at point O and are shown dashed. Find the indicated measure.

Find MO . 26.8

Find PR . 26

Find MN . 40

Find SP . 22

Find QN . 20

Find MP . 44
